## IN THIS ISSUE:

- 2 Take the hard work out of Spraying!
- 3 See and work better with a Blue Wizard
- 4 December 2012/January 2013 Specials

## Reduce coating warranty work by 77%....

...and save labour costs, wastage and solvent usage with the new **XP70 Sprayer!**

Remember that job where the paint didn't cure? And then you found out that the hardener wasn't added in!

If you're regularly spraying with dual component (2K) coatings, you'll know that getting paint mix ratios just right is critical for avoiding costly coating failures – you run the risk of paint going off too quickly in your spray lines and guns, and lots of hassle from angry customers.

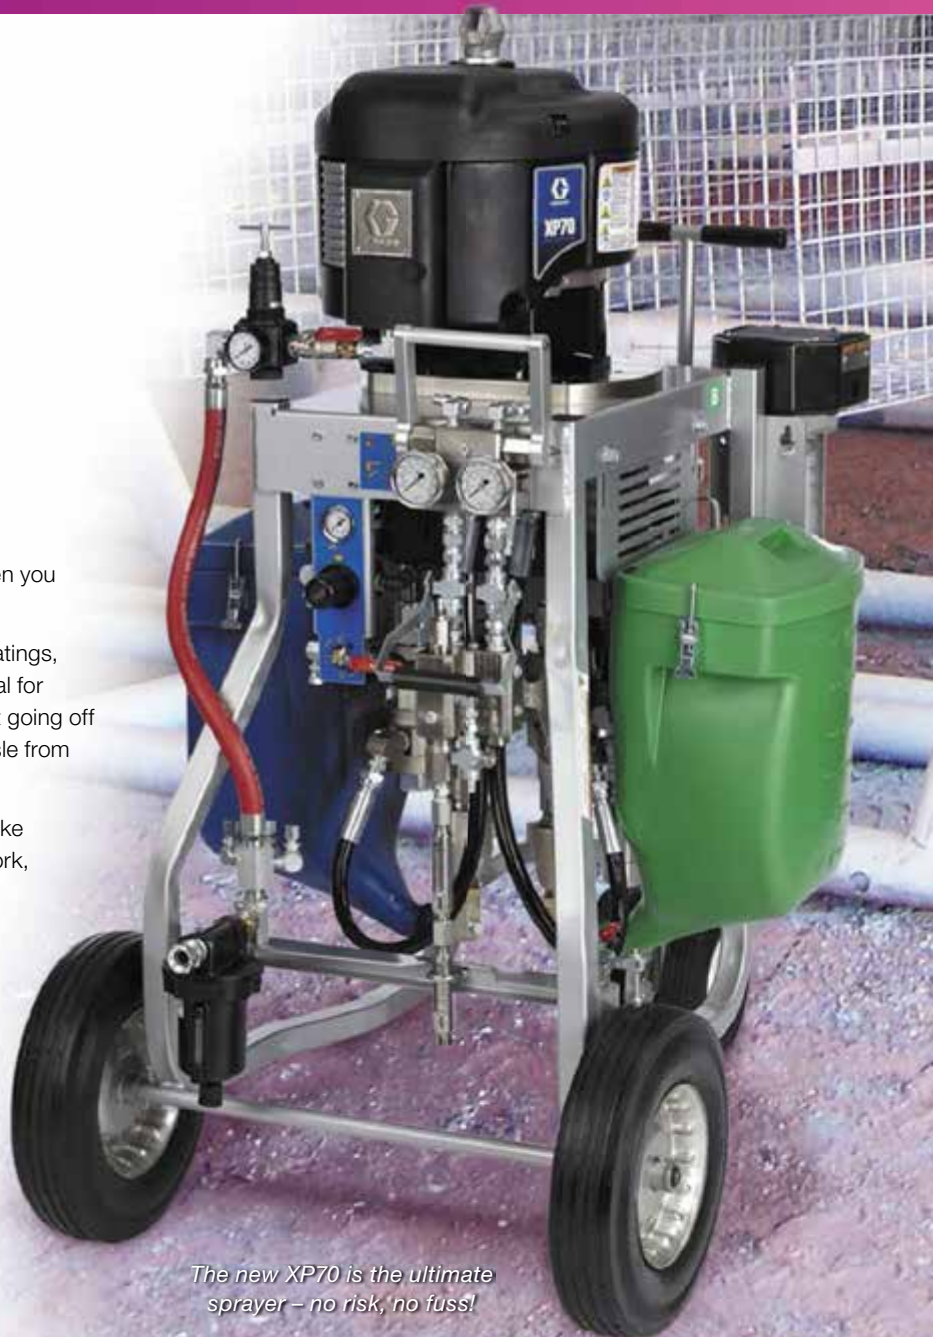

Pre-mixing paints (or "hot potting") is just too risky to make sense – especially when you can cut out all the guesswork, wasted materials AND deliver an accurate coating mix ratio every time with every job!

Blastmaster's latest **XP70 Sprayers** are specially designed to make all plural component spraying **spot-on, quick, and easy**, saving you time, stress and money.

**FREE TRIAL!**

*The new XP70 is the ultimate sprayer – no risk, no fuss!*

# Make it easy on yourself!

## Take the hard work out of spraying.

The new XP70 Sprayer is a high pressure proportioner pump that automatically mixes your paint and catalyst at the correct ratio as you spray.

- No hand mixing ("hot potting")
- No guesswork
- No paint waste
- No hardening in your spray lines
- No stress.

## Eliminate waste, save yourself money

The XP70 Sprayer keeps your paint and catalyst separate until just before they reach the spray gun, so there is no need to worry about pot life – you can just concentrate on spraying.

Simply fill the hoppers, turn on the air supply, prime the pumps and you're away!

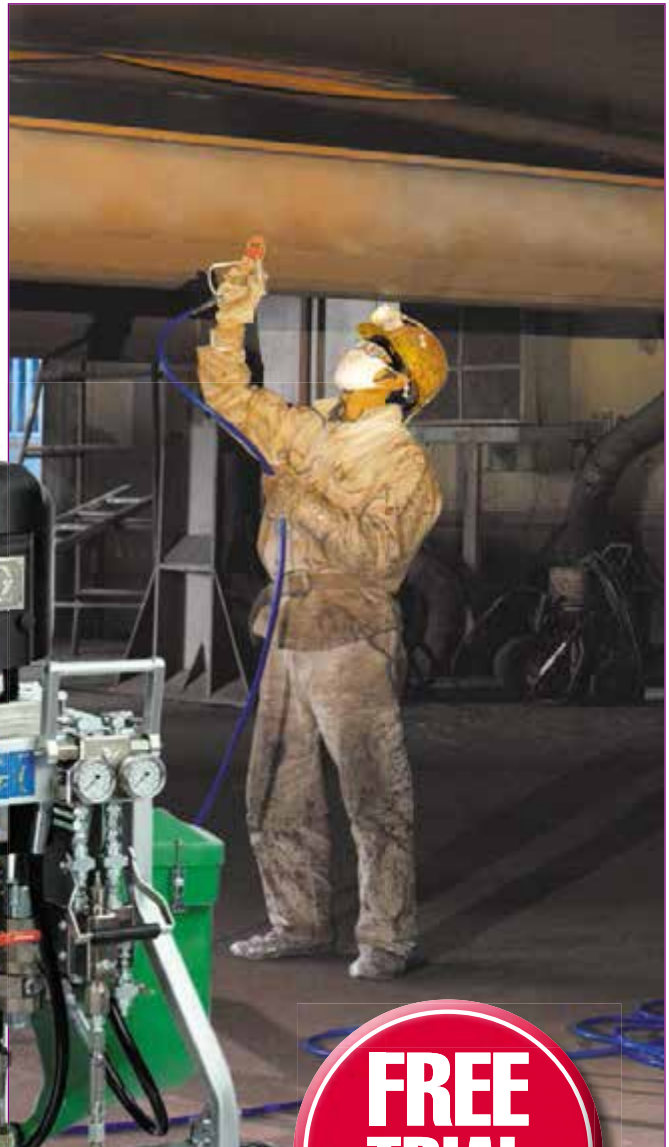

## A complete package

Choose from mix ratios between 8:1 and 1:1, spray pressures of up to 8000 psi – you can even run up to two guns at once off a single XP70 Sprayer!

The XP70 comes as a complete base unit, with a number of options to suit different applications.

Set up and clean up is quicker and cleaner, so there's more money in your pocket at the end of the day.

This is the only way to spray!

# See better, work better!

**Don't lose time waiting for the dust to clear – get rid of it fast with high performance Blue Wizard extraction fans.**

Can you see what you're doing while blasting?

Dust is the number one cause of poor operator visibility, leading to wasted time, overblasting, reworking, poor quality control and potential safety problems on site.

Dust control in contained areas is vital for visibility and efficient blasting, so stop guessing and get rid of that dust fast with a Blue Wizard high performance fan.

## Choose which energy source

Quick and easy to set up, the Blue Wizard dust extraction fans can be:

- Compressed Air Powered
- 3 Phase Electric (415V) or
- Single Phase Electric (240V).

Electric powered units must not be used for extracting fumes, solvents or any other flammable airborne contaminants. Consider using the pneumatically driven unit with antistatic ducting in damp or hazardous areas. Custom electrical configurations are also available on request (always check for compliance with local codes and regulations).

## Portable – quick and easy to set up

A 500mm diameter flexible duct connects directly to the fan for convenient locating. These fans have been designed specifically for harsh use in abrasive blasting environments in the surface preparation and coating industry and can ventilate up to 10,000cfm. Inflatable dust socks can be attached to the fan to collect visible dust particles, but should not be used to collect hazardous dusts such as lead. The dust sock is ideal for temporary contaminants and blast sheds.

Suck dust out fast or blow it away at up to 10,000cfm with power-packed Blue Wizard fans. Stop the down time and start blasting!

*Don't let dust obstruct your visibility – clear the air with a Blue Wizard extraction fan.*

*Built to last – the Blue Wizard is tough enough to withstand the harshest blasting conditions.*

## GET YOUR DUCTING NOW!

Take advantage of our End of Year Offer.

Get **20% OFF** our DCD 2033H Heavy Duty Ducting.  
Phone **1800 882 229**. Applies to 5m or 10m lengths.

# The NEW UltraBlast® 8,700psi diesel-powered, hot water unit!

## The all NEW TrailerJet™ High Pressure Cleaning System.

These rugged, industrial-duty, high quality European made machines are designed for heavy-duty wash down applications requiring the use of high pressure hot water – totally independent of power supply.

With pressures available up to 600 bar (8,700 psi) and with temperatures up to 120°C, these units are ideal for a multitude of industrial applications including removal of grease, oil, tar and dirt from structures and vehicles; cleaning tank interiors; removal of paint and graffiti; removal of chlorides from surfaces....and much more!

With their totally integrated design, mobilisation is fast – you can be set up and working within minutes of arriving at your job site.
