

# What Determines the Quality of a Blast Hose?

## A GOOD Blast Hose

- High quality rubber – longer life, good anti-static properties
- Safe and reliable construction – maintains strength and flexibility
- Reasonable price – increase your profits.

## Remember:

“The bitterness of poor quality is remembered long after the sweetness of low price has faded from memory.”

*Aldo Gucci (1938)*

Recycled and poor quality rubber hose could last only 150 to 200 hours.

High quality rubber hose can last 400 to 500 hours.
