

Why the correct grade of Abrasive will work harder for you.

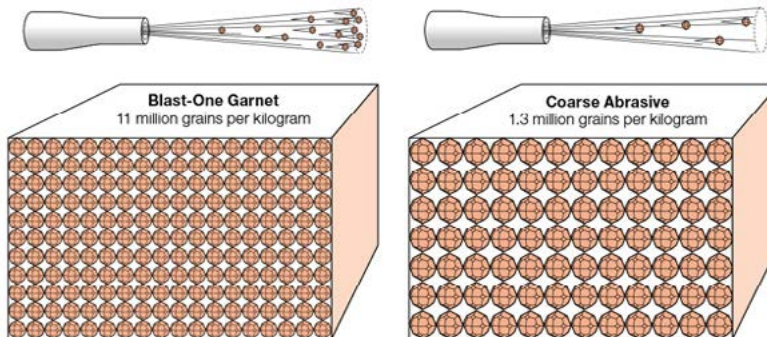

Here's the comparison between **Blast-One Garnet** and an **Imported Grade Abrasive**:

With **Blast-One garnet** the blast stream can carry 4 times the quantity of garnet grains, each carrying tremendous kinetic cleaning power. The smaller grains also scour out deep into the pits and leave a cleaner surface, faster.

With imported **coarse abrasive** it is very hard to clean out the pits without using a lot of abrasive.

Each grain of garnet carries energy for cleaning!

You should also ask yourself
"How much Abrasive should I use each hour?"
