

How do you get paint to spray properly when its freezing cold?

The answer is... USE HEAT!

- ▶ Use a high pressure viscon heater
- ▶ Insulate your hose from the pump heater to the gun
- ▶ Use a heated hose kit to keep your product warm as it travels to your gun
- ▶ Use a drum blanket for wrapping a 208 litre drum
- ▶ Use a rigid metal band heater for a 19 litre pail
- ▶ Use a 208 litre drum plate heater
- ▶ Store paint and spray equipment in a heated building/room

Effect of Temperature on Viscosity
