

# Using Triclover Couplings can save you downtime

*Removing a Triclover to separate the metering valve and the blast pot.*

## **Here are some of the advantages of the Triclover:**

1. No more removing of hose clamps and rotating the valve to unscrew it from the pot,
2. Easier access to clear obstructions from the pot,
3. Allows you to service the metering valve quickly to reduce down time,
4. Speeds up the process of emptying the blast machine when changing abrasives.
