The genius of the Micro Mist Filter

THE IDEAL WAY TO PROTECT THE BREATHING QUALITY OF YOUR WORKERS

The addition of a Micro Mist Filter, placed between the air input regulator and the air filter casing, traps any dispersed oil and keeps it from entering your filter. This allows for longer filter life and prevents oil from entering your alarm system and corrupting your sensors.

The Micro Mist Filter prevents oil from entering the lungs of your operators which means better quality air for them to breathe.

Call Blast-One today to order your Micro Mist Filter
